

CNC Consultancy Overview

InOne's Technical Consultants are trained to integrate and balance our Customers' technologies into a finely tuned and peak performing system.

Our consultants are experts in PeopleSoft EnterpriseOne (Formerly J.D. Edwards) software. In fact they are certified by PeopleSoft in the two core PeopleSoft/J.D. Edwards technical disciplines, Configurable Network Computing (CNC) architecture and software development tools.

Through a combination of our consultant's own skills and those of key Business Partners with whom InOne has developed close working relationships, we are able to offer skills that extend to open system vendors and technologies that our Customers use to support their businesses.

From project planning and readiness assessments to custom application development and Web architecture, InOne provides the following technical service capabilities

Infrastructure :

- Security continuity and recovery.
- Security and systems management.
- CNC configuration and network infrastructure.
- IT solution design and benchmarking.

Application Development

- Development and enhancement.
- Installation and configuration.

e-Business:

- Web application architecture and development.
- Workflow design and development.
- Database design and integration.

Planning and Support:

- IT solution configuration planning.
- Project management.
- Technology assessment and readiness.
