“The JD Edwards EnterpriseOne give to OSPAP visibility across the warehouse movements and provide the necessary information to make smart business decisions in very competitive environment. Implementation of „smart“ warehouse in JD Edwards Boosted profit margins through improved inventory management.” — Vladimír Pázler, IT manager, OSPAP

OSPAP Improves Quality of Services and Productivity Gains of Warehouse Operations

OSPAP is the largest wholesaler dealing with paper and paper articles in the Czech Republic and thanks to its parent company PaperlinX is part of the largest trade groups in its field in the world. It has its own selling and warehouse premises at its disposal, which are evenly distributed all over the territory of the Czech Republic. The conceptual assessment of the market, know-how of a multinational company, logistics at an European level as well as training of its staff towards customer - oriented thinking is aimed at a clear target – perfection of services and building up an image of a reliable partner.

Challenges

OSPAP used old ERP system without any support for logistics and warehouse operations. BSC Praha determined that the Oracle JD Edwards EnterpriseOne with warehouse management modul will help the warehouse operation realize significant productivity gains and efficiencies. An advanced mobility solution with use of Motorola handhelds with barcode readers would streamline processes, improve productivity and increase efficiencies to deliver a higher return on investment.

Solution

BSC Praha provided for OSPAP complex implementation of Oracle JD Edwards, the wireless systems engineering and integration services of mobile handhelds terminal. After the wireless site survey, wireless network in all warehouse location of OSPAP was realised, BSC Praha configured all handheld clients to communicate with the Oracle JD Edwards trough Citrix server. This provided a direct connection between Oracle WMS and the Motorola handhelds with Citrix online terminal client, empowering warehouse workers to perform transactions right from the shop floor.

The Deal

- Deep integration with all implemented processes
- Simplified IT management by implementing single, centralized solution od ERP JD Edwards
- Ensure continual deliveries of goods from central warehouses to the standby warehouses of OSPAP distributors on a permanent basis
- Oracle JD Edwards WMS provide to OSPAP the flexibility to ship orders on a 24x7 basis and to automate the prioritization of orders, which has increased customer satisfaction.
